## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 10-24 are rejected under 35 U.S.C. 102(e) as being anticipated by Roberts (2003/0152039).

Consider claim 10, Roberts teaches a system for generating service-oriented call-charge data for at least one service in a communication network (see paragraph 0002), comprising: a charge metering domain; metering points, the metering points being network elements for charge metering provided in the charge metering domain (see paragraphs 0024; 0039-0053); a charging domain; charging points, the charging points being network elements for charging provided in the charging domain (see paragraph 0026); and a policy function which controls both the charge metering points and the charging points by using predefined rules (see paragraph 0027).

Consider claims 11-23, Roberts directly and/or indirectly teaches the claimed policy function features (see paragraphs 0027-0028, 0058-0060).

Consider claim 24, Roberts teaches a control device for generating service-oriented call-charge data for at least one service in a communication network having network elements for charge metering provided at metering points in a charge metering domain (see paragraphs 0024;

0039-0053) and having network elements for charging provided at charging points in a charging domain (see paragraph 0026), the control device comprising: a policy function which controls both charge metering points and charging points by using predefined rules (see paragraph 0027).
